

Hedy Lamarr

(1914 - 2000)

Imagine a Hollywood star who wasn't just dazzling on the screen but also a super-smart inventor!

In addition to being a famous actress, Hedy helped create something amazing during World War II. It's called frequency hopping, and it's like the secret code that makes your gadgets talk to each other without anyone spying on them.

Thanks to Hedy, we now have Wi-Fi and Bluetooth!
